

Business WiFi

THESE ARE VITAL FOR YOUR BUSINESS:

- Complete facility coverage
- Easy cloud management
- A single network with multiple ID's
- Production and guest networks
- Robust wireless security
- Mobility handoffs throughout your workspaces

KNOW MORE

Here's What We Offer

Our services include a wide selection of options, from standalone CCTV installation to remote monitoring. Here's a breakdown of what we have in store for you.

WiFi Network Design and Deployment

Our experienced network engineers work closely with you to design a WiFi network that meets your specific needs.

Network Optimization & Performance

We analyze and fine-tune your existing WiFi infrastructure to maximize performance and eliminate bottlenecks.

Wireless Security and Access Control

We implement industry-best practices to secure your business WiFi network. This includes configuring encryption protocols.

Scalability and Future-Proofing

We design your business WiFi network with scalability in mind, allowing it to grow alongside your organization.

Technical Support and Troubleshooting

Whether it's troubleshooting connectivity problems, optimizing network performance, or addressing security vulnerabilities.

Why Remote Techs?

With the improved speed, reliability, and portability of mobile devices it is critical for businesses to have a stable, robust Wifi network. Remote Techs will test your environment for weak and trouble areas. We will then design and install a system that will keep your connections secure, and your staff productive and happy. And ask us about getting a complimentary [network assessment](#) (a \$499 value) performed at your offices.
